Drill Testing-Core Drilling			
	Drill Rig Test Depth Limit		
	Drill Testing	Each Unit	
Drill Testing includes all costs regardless of depth. (If exact depth is not able to be reached, the max depth reached by right should be listed with note that bedrock was not reached)			
Prices should include mobilization, demobilization, and traffic control			
References			
Drill Testing Project	Reference Agency	Contact	Phone/email
Name/Year/Location	Name/City/Agency	Name	

Drill Testing-Boyd County must repair several roadway shoulders using the Rail & Cribbing (aka Rail/crib or R/C) method of repair. Rail/crib is a standard method of repair in Kentucky for failed roadways and embankments. Often a depth to Rock (aka “bore test” aka “depth of bedrock test”) must be preformed prior to road repairs in order to develop a proper scope of work and cost estimate.

This work is for drill testing only-rail and crib repair work is not part of this bid.

The work as part of this bid will be separated from, often weeks or months ahead of any actual follow-up rail and crib repair work.

Drill test should be done as close to the failure as possible. Said another way-if the failure is at the shoulder, a drill test in the roadway centerline may not be accurately test the depth of the bedrock at the location: therefore, the drill location should be at the shoulder not at the centerline.

No specific format for the test report is needed, however the report should be included.

-Letterhead

-depth to bedrock

-signed

-at least 2 pictures of the site using a photo app that captures date and GPS location (such as solocator or GPS camera)

– One photo should be at the test location so that the lat/long of the drill location can be accurately documented/verified
